

# News from JANO

## **JANO teams with Harris & Harris for Collections**

We are proud to announce that Harris & Harris (H&H), a leader in debt collection services and JANO have joined forces to form a turnkey debt collection solution for Court Clerks. This solution will leverage the strengths of both companies through a seamless and integrated flow of data between Clerk servers running JANO software and H&H.

While this no cost solution does not require any IT infrastructure changes on the Clerk side, the solution will provide automatic flow of referral, payment, and remittance transactions between servers. David Harris, Vice President and COO of Harris & Harris, stated, “This integrated offering is the most sophisticated solution our company has joined.” Unique to this integration is a periodic reconciliation transaction that will be automatically sent to H&H, maintaining collection data integrity between the two databases.

Presently, 5 existing JANO customers have signed up for this solution. The rollout of this solution has begun.

## **Power to Madison**

Congratulations are in order to the entire Madison County IT support team. Their successful upgrade to the IBM Power 6+ Server and V6R1 of the iOS over this past Thanksgiving weekend accomplished two firsts:

- The first JANO customer to move to V6R1
- The first JANO customer to migrate images to a network attached optical storage using UDO-2 technology from their old IBM direct connect 3995 optical data-server.

This very powerful Power 6+ server features 100% SAS (Serial Attached SCSI) I/O components. It is a screamer with a procurement cost of just a fraction of their first AS/400.
