

JExpress Update

JExpress is in production in several organizations and we thought we would give all an update. Below are some quotes from users and support staff:

From Application Administrator: *“Our output documents look really slick”*

From Probation Officer: *“It is really fast”*

From County IT: *“..Click Once saves us a lot of time....”*

From Court Clerk: *“Drug Court is over – and JExpress is AWESOME!!!!”*

From JJS Engineer: *“JExpress is faster than OV, faster than DTM and faster than our old MS-Word Interface. It is really fast”.*

Why JExpress? First and foremost, numerous changes in technology have DEMANDED the JExpress development effort. Among these are changes in the desktop OS (VISTA and WIN7), the need for more security in our computing environment and of course new features that Users are demanding. When you add JJS’s mission to continually improve and add functionality and manageability of our software offering, the need for JExpress is compelling.

What is JExpress? JExpress is software that will run on the PC that encompasses all here to date JJS developed PC functionality. This includes our MS-Word Interface, 3G and cash drawer components. All future PC functionality will be built into JExpress.

Benefits to our customers. Our Customers have demanded user customizable output. With JExpress any output document can be designed in MS-Word can be produced interactively or in batch. First and foremost, JExpress is VISTA and WIN7 (the next version) compliant and will be backwards compatible to WIN2K. Secondly, manageability has been improved because we have one software component versus up to 4. Manageability is also improved by new component called ‘Click Once’, which means that you will install JExpress on the desktop once and ALL future updates will be automatically downloaded from the iSeries Server. Lastly, we have made many enhancements to all existing functionality and have laid the foundation for future enhancements.
